A NEW FACE

We welcome our new advisor, Ms. Yadira Castillo, to the Microbiology Department. Yadira brings her advising experience from the College of Education. We're excited to have her on our team.

Things that are changing for the fall:
Do you have the DawgCheck app on your phone?
Find the new bus routes
The libraries are reopening with restrictions

If you missed the COVID-19 discussion with President Morehead and a panel of administrative faculty, you can watch the recording.
Research and Study Abroad

Directed research opportunities in MIBO 4960R, 4970R and 4980R are limited this fall due to physical distancing guidelines in the labs. If you are a fourth year student needing help finding ways to fulfill our research requirements please contact Ms. Castillo or Dr. Walker as soon as possible.

Study abroad at Oxford, England! Courses such as biochemistry, cell biology and microbiology are offered. Check out this video to learn more.

Classrooms will look different this fall. All instructional spaces are arranged to ensure 6 foot distancing between desks. You will see a "Sit here" sign on designated seating. Depending on the size of class and classroom, you may attend class a little differently.

NOTE! All course wait lists will be dropped on August 17th. This means any remaining seats that open up in classes will be available on a first-come- first-serve basis.
MICROBIOLOGY

COMMUNITY NEEDS

The Clarke County public school system has opted to go completely online for education this fall.

Safer Education Solutions (SES) is a grass-roots volunteer network proactively seeking families in need of assistance in placing their safer education needs. They are recruiting volunteers, babysitters, and tutors with passion, information, and resources to help build the network.

Contact them at safereducationsolutionsga@gmail.com if you are interested in helping
